DURHAM SCIENTIFIC SIGNS AIRPORT SECURITY DEAL

Durham Scientific Crystals Ltd. ("DSC"), an Amphion Innovations plc (LSE: AMP) Partner Company, has signed a contract with the UK Home Office to develop revolutionary, automatic explosives detectors for UK airports. The technology will allow, for the first time, multi-view imaging for the identification and discrimination of explosives and flammable liquids.

DSC managing director Dr Arnab Basu said. "The whole aviation market for explosives detection is worth well over US $1 billion a year and DSC's product will have a high degree of differentiation within the sector. When fully trialled, these machines could replace all existing airport x ray machines throughout the world. This development could transform airport security, which faces new challenges with the heightened terrorist threat.

Richard Morgan, Chief Executive Officer of Amphion Innovations plc (LSE: AMP) said, "DSC's patented technology has broad commercial opportunity in medicine, industry, and defense applications, as well as in security.
