

Join one of the world's most innovative technology companies

Kromek is a fast-growing Anglo American platform technology company recognised globally as a game-changing innovator in the field of digital x-ray and radiation detection and imaging technology for the security screening, medical imaging and nuclear detection markets.

Specializing in developing end-user radiation detection products utilizing proprietary CZT semiconductor and industry standard scintillation detector technologies, Kromek's product portfolio is growing fast with significant new product /new market opportunities for these disruptive technologies.

Excellent salary and benefits package

Kromek is looking for exceptionally talented, ambitious and motivated individuals seeking an international role within a young, highly progressive technology firm and would like to hear from high-calibre individuals who can take the company forward.

For more information on this position and other opportunities, contact: Julie Savage on 01740 626060, or email: recruitment@kromek.com

Product Engineer

The Opportunity:

Kromek is looking for two Product Engineers to join its team in Sedgefield. The successful candidates will oversee some of our world leading nuclear product portfolios. The role will involve some travel, averaging approximately one week per quarter.

Responsibilities:

- Technical ownership for Nuclear products from concept to early adoption and manufacturing transition
- Technical product readiness management
- Key interface to customers and internal stakeholders on all product technical issues, including: product definition, design specification, prototyping and type testing
- Ensure product technical compliance to specification, market needs and overall product roadmap
- Demonstrate a leadership role in influencing and overseeing internal groups with respect to their products
- Key interface for providing product technical support to the sales and marketing functions.
- Oversee product certification
- Hands on scientific and product usability testing

Essential requirements:

- Minimum of 5 years' experience in an electronics product engineering role
- Proven track record of managing products through the product lifecycle
- Proven Project Management experience for product development
- Proven experience in electronics product lifecycle management
- Demonstrated ability to achieve results working in teams

Desirable skills:

- Agile development project management experience
- Experience and willingness to travel both within the UK and abroad
- Experience managing nuclear detection systems
- Knowledge of radiation systems algorithms and algorithm development

The Benefits:

- Life Assurance
- Stakeholder pension scheme
- Share Options
- Private Health Insurance Scheme
- 25 days holiday plus statutory days
